Subject: 02070-0017 Hitch Pin - Spring Retainer Roll Pin

Harlan has received reports that the roll pin that holds spring tension on hitch pin have been breaking in the field. In service this pin was required to absorb the impact of the spring driving the roll pin into the top of the hitch base assembly every time the hitch handle is released. In time this would cause the roll pin to shear off leaving the hitch free and un-secured.

Harlan part number 02075-0196 Hitch Pin Kit delivers a simple remedy. Below is a illustration for the installation of a spring retainer kit on your current hitch assemblies, installing the spring retainer will prevent the roll pin from striking the hitch base.
